

# Nursing Resource Center

## Support for a rapidly growing industry

Employment opportunities for nurses are plentiful; more and more students are enrolling in LPN, LVN, ADN, RN, and BSN programs so they can join this growing industry.

To support this growth, Gale® has developed *Nursing Resource Center*. *Nursing Resource Center* is a new online resource designed to support nursing programs at

two-year community colleges, four-year colleges and vocational education high schools, as well as at public libraries supporting these schools nationwide. This resource offers premier supplemental reference material geared to the education and research needs of nursing students, providing relevant, easy-to-understand information on nursing topics that is presented in an intuitive interface.

## Access unequalled content

*Nursing Resource Center* provides the wide array of content needed for research papers and basic nursing theory overviews, including access to sample care plans, multimedia content, full text reference books, citations to journals in the field and more.

Nursing students can search through millions of pages of content from the top reference and textbook publications in the field, as well as animated depictions of human anatomy.

### Some included titles:

- *Gale Encyclopedia of Nursing and Allied Health*, 2nd edition
- PDR Nurses Drug Handbook
- *Gale Encyclopedia of Medicine*, 3rd edition
- *Foundations of Basic Nursing*, Delmar
- *Maternity Nursing Care*, Delmar
- *Delmar's Pediatric Nursing Care Plans*
- *Macmillan Encyclopedia of Death and Dying*
- And many more

Tabs that reflect the nursing process make the interface easy to use.

Entries offer complete information, often including a description of the term searched.

## A student-friendly, intuitive interface saves time

Gale worked with industry professionals, as well as publications from the American Nurses Association to better understand the nursing curricula. Gale's research revealed that early classes in any program teach the nursing process — a workflow that organizes how students care for patients and guide their treatment. The steps are: Assessment, Diagnosis, Outcome Identification, Implementation and Evaluation. The intuitive interface and organization of *Nursing Resource Center* reflects these steps using clearly defined "tabs" — Diseases and Conditions, Assessments, Diagnostics, Interventions, Drugs, Care Plans, Multimedia, Journal Citations and Related Articles — to help students quickly arrive at the results they need.

Easy-to-understand information is returned quickly.

Detailed medical animations bring anatomy "to life".

## Ebooks and other resources meet the needs of any curriculum

*Nursing Resource Center* is the perfect complement to a number of reference materials also available from Gale; our additional eBooks, periodicals and databases offer a comprehensive data set for any school or public library.

### For example:

- *The Gale Encyclopedia of Alternative Medicine, 2nd Edition*
- *General OneFile / Academic OneFile*
- *Diseases and Disorders* (Lucent Books)
- *Encyclopedia of Disability* (Sage)
- *Encyclopedia of Pain* (Springer)
- *Encyclopedia of Medical Devices and Instrumentation* (Wiley)
- And many more

## Subscribe now to give your users the 24/7 access they want
