

ReadSpeaker

Text-to-Speech Technology that Empowers Users!

About ReadSpeaker

ReadSpeaker, the market leading service for speech enabled web, and Gale are partnering together to provide text-to-speech capability to Gale's online resources. This text-to-speech feature appearing on each document page will allow users to listen to the text as it is read aloud.

In operation, the ReadSpeaker function converts text and streams the corresponding audio content without any software downloads or special plug-ins needed. Users can select any portion of text or an entire article to be streamed as audio. With a click of a button, any Gale online resource's text can be read aloud via the user's computer, making Gale content accessible in a new way. These audio segments can also be saved as MP3 files for use on MP3 players for listening at a later time.

ReadSpeaker aims to help make web content accessible for people with dyslexia, learning disabilities or low literacy levels, as well as people with English as a second language, elderly individuals with impaired vision and others that like to listen, as well as read.

Listening to a Document

When the audio player dashboard appears above the text of the document, you will be able to listen to all or part of a document read aloud by a computer-generated voice. You can also download an audio version of the document as an MP3 file. *Note:* the color of the player dashboard may vary depending on the Gale product.

Listening to the Entire Document

If you want to hear the audio version of the whole document, click the **Play** button (the triangle) from the player dashboard. Note that if you have any part of the document selected on the page, you will hear just that highlighted text. Refresh the page and then click the **Play** button -- with no text selected -- to hear the entire document.

To stop the audio, click the square **Stop** button on the audio player dashboard. To make the audio louder, click on the plus sign (+). To turn the volume down, click on the minus sign (-). During playback, you can also drag the slider bar back and forth to change the place in document that is being read.

To listen to the same text read again, just click the **Play** button.

Note: Refreshing the page or selecting text on the page will cause the audio playback to stop. Double-clicking the mouse button will also stop the audio.

The audio player will read aloud the first 190,000 characters when you have selected the entire document. Any text beyond this limit will not be read aloud. A pop-up message will warn you if you have exceeded the audio playback limit.

Listening to a Highlighted Portion of the Document

If you want to listen to just part of the document, use the mouse to select text from the document (the words you select will be highlighted). Then click the **Play** triangle button and the voice will give some instructions and then read just the words you selected. The player dashboard will read up to 1000 words that you have highlighted. If you try to select too many words, a pop-up message will appear. You must then select a smaller part of the document.

Once you use the mouse to select words on the page, the player dashboard will be ready to read only a part of the document. To listen to the same text read again, just click the **Play** button, or you can select another part of the document and click **Play**. At this point if you want to hear the *whole* document, you must first refresh the page using your browser's refresh page control. Then click the **Play** button and you will hear the entire document, starting with the title.

Note: Refreshing the page or selecting text on the page will cause the audio playback to stop. Double-clicking the mouse button will also stop the audio.

Saving the Entire Document as an MP3 File

In addition to listening to the document, you may also download an audio version of the document. The system will create an MP3 file that you can save on your computer or to a disk, jump drive, etc. Here's how:

1. From the document display page, click the **Download MP3** button. Make sure that no part of the document is selected.
2. Your browser will display a pop-up window so you can save the MP3 file
3. You may change the name of the file to be saved, but keep the *.mp3* extension

General Information

Which Gale products have the ReadSpeaker (read-aloud) feature?

The read-aloud feature is available in the following Gale products: the *Student Resource Center* family of databases, *Discovering Collection*, *Junior Reference Collection*, *Opposing Viewpoints Resource Center*, *Science Resource Center*, *Kids InfoBits Literature Resource Center* (including *Literature Resource Center* with the *Twayne's* and *Scribner* add on modules), *Literature Resources from Gale*, *LitFinder*, *Global Issues in Context*, *GREENR*, , all *InfoTrac* periodical products operating on the *PowerSearch 2.0* platform, and eBooks operating on the *Gale Virtual Reference Library 4.0* platform.

Where in the product can I find the audio playback controls? In other words, which pages can be converted to speech?

Just look for the audio player dashboard, which lets you hear the text on the current page. You can listen to all types of documents, except for documents from the **Multimedia** tab.

Will the audio player read aloud everything on the page?

When viewing a document, you may listen to the entire article read aloud, or just a portion you highlight with the mouse. In addition to the text of the article, the audio player will also read aloud embedded links and the alternate text associated with images, where available.

The audio player will not read aloud the navigation controls on the page or the sidebar panel.

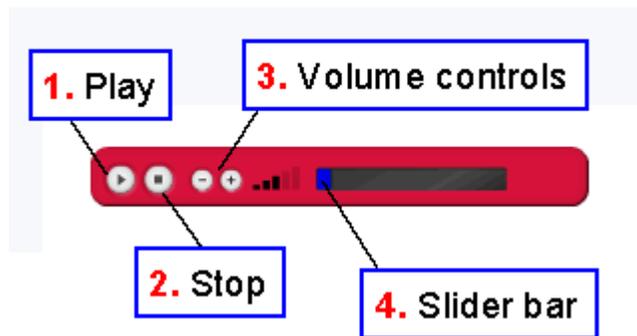

What special plug-ins do I need for the audio player to work?

No plug-ins are necessary to use the audio player dashboard. Most modern web browsers allow for automatic audio playback, although in rare instances you may have to use Windows Media Player, QuickTime for Mac or Windows, or other similar application. For best results, make sure you are using a current version of your web browser.

Document ReadSpeaker (read-aloud) Playback Instructions

How do I use the audio player dashboard?

Audio Player Dashboard

Use the audio controls to:

1. Play the audio: Click the triangle button
2. Stop the audio: Click the square button
3. Change the volume: Click minus sign to adjust the volume down; click the plus sign to adjust the volume up
4. Move ahead or back in the audio: Drag the blue rectangle on the slider bar

Document ReadSpeaker (read-aloud) Troubleshooting Tips

The audio playback suddenly stopped before reaching the end of the document or the selected part.

One of the following situations may have occurred:

- Make sure you did not press the **Stop** button in the player dashboard. If so, just click on the **Play** button to hear the text again.
- You may have accidentally or intentionally selected text somewhere on the screen. This will cause the playback to stop.
- You may have accidentally or intentionally double-clicked the mouse button while the audio is playing. This will cause the playback to stop.
- You may have lost your Internet connection while the audio is playing. If the Internet is disconnected this is a normal behavior. Wait for the Internet connection to function and either refresh the page or log in again.
- If none of the previous occurred and your Internet connection is functioning properly, this could be an error. Please report this behavior to a Gale Technical Support Representative. Gale Technical Support can be reached at 1-800-877-4253 (Option 4) or online at www.gale.com.

I selected some text. Immediately the player dashboard on the screen vanished. What should I do?

Please check if you are connected to the Internet. If the Internet is disconnected this is a normal behavior. Wait for the Internet connection to function and either refresh the page or log in again. If the Internet is connected this could be an error. Please report this behavior to a Gale Technical Support. Gale Technical Support can be reached at 1-800-877-4253 (Option 4) or online at www.gale.com.

Is there a limit to the size of the document that I can hear aloud?

The audio player will read aloud the first 190,000 characters if you want to hear the full document. All text beyond this limit will not be read. The limitation for selected text is 1000 characters. The application will prompt you if you have exceeded this limit to play audio and you will have to re-select a part of the document again.

I want to play the audio to read the text in the whole document. I tried pressing Control-A to select the whole document. What should I do?

You should not press Control-A or select any part of the document if you want to hear the whole document. However, if you have pressed Control-A, an alert will pop up giving you the instructions to play audio. You have to:

1. Click **OK** on the alert
2. Click the page with your mouse button to remove the highlight
3. Refresh the page
4. Click the **Play** button to hear the whole document

I selected some text and heard the audio. After completion I pressed Control-A to hear the whole document. I clicked the Play button and heard the previous text selected. I did not hear the whole document. How can I now hear the entire document?

This is normal behavior. You can hear the full text document only when you first bring the document up on your screen. Later if you select any text and whether you play the audio or not you lose the ability to hear the audio for the whole document, until you refresh the page.

At this point, if you would like to hear the entire document aloud, you must first refresh the page using your browser's refresh page control.

I selected some text and played the audio. To hear the same content again do I need to deselect and select the same text once again?

No. Once you have selected some text and played the audio, you do not need to select the same text to play it again. Instead click the **Play** button again to hear the same text. Playback will stop if you:

- Double-click the mouse button
- Select any part of the document again
- Refresh the page
- Navigate to another page and come back to this page

It took me 30 minutes to hear the text in the document. I clicked the document page and it asked me to authenticate myself again. Why did this happen?

A session in a Gale online product generally times out after 20 minutes. Listening to a document read aloud for a long period of time does not register as activity within the product. Simply restart the session when prompted.

I am trying to print the document by either clicking Control-A or by selecting a portion of the text. I am getting a warning message not to select more than 1000 characters. Will this prevent me from printing the page?

No, it will not prevent you from printing the page. The alert is a warning if you want to play the audio. This will not prevent you from performing other functions in the page.

I have pressed Control-A to select the whole document. My intention is not to play the audio. I still see an alert coming up. What should I do?

The alert is just for your information. Click the alert and go ahead doing other functions on the document displayed.

I translated the text to some other language that is available in the application. I did not hear the text in this language. What should I do?

Currently the audio player tool as used in a Gale online product will only allow you to hear text displayed in the English language.
